The Standard in Fluid Maintenance

Engine Prelubrication.

Oil & Fluid Evacuation.

Fleet Maintenance Intelligence.

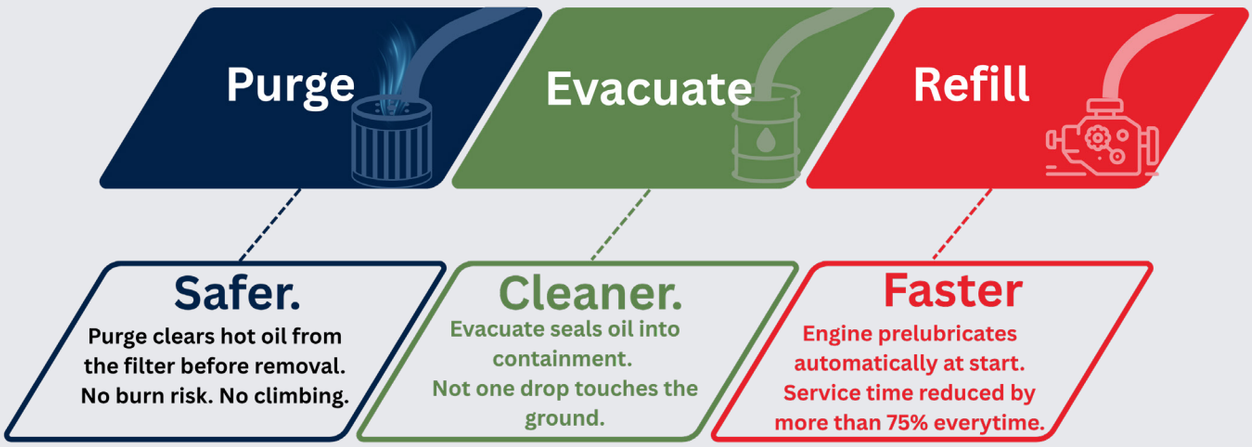

Made in Pennsylvania, USA

The Standard in Fluid Maintenance

“The Standard” is RPM’s patented process for safer, cleaner, faster preventative maintenance.

Safer. Purge clears hot oil from the filter before removal.
No burn risk. No climbing.

Cleaner. Evacuate seals oil into containment.
Not one drop touches the ground.

Faster. Engine prelubricates automatically at start.
Service time reduced by more than 75% everytime.

Every cycle re-establishes oil pressure and filtration before the engine restarts — *the two conditions that govern accelerated component wear.*

Four Decades of Fluid Maintenance Engineering

There's a better way to maintain equipment. We've been proving it since 1985.

RPM Industries designs and builds fluid maintenance systems engineered for the real world — construction sites, power generation, and over-the-road fleets. Every system is designed and built in Washington, Pennsylvania.

The world's most demanding OEMs trust RPM because the performance is undeniable.

Four Decades | Built in the USA | ISO 9001:2015 Certified

RPM INDUSTRIES

THE STANDARD IN FLUID MAINTENANCE

Engine Prelubrication Systems

Every engine is most vulnerable the moment it starts.
Prelube builds oil pressure before the engine cranks every time.

Prelube

Automatic engine prelubrication that pressurizes all oil passages with clean oil before cranking, triggering automatically to protect bearings, minimize dry start wear, and extend engine life.

Post Lube

Circulates cooling oil automatically postshutdown to protect turbos and minimize idle time with no coking risk. Offered as an add-on to Prelube or as a standalone system.

Periodic Prelube

Periodic oil cycling for standby engines automatically ensures reliable startup capability after extended idle periods.

Prelube Timestamp

Automatic service timestamp system that logs maintenance to your fleet monitoring system.

Oil & Fluid Evacuation Systems

Oil moves directly from sump to containment through a zero-leak connection. Not one drop touches the ground.

QuickFit™

Single-connection fluid service solution that purges, evacuates, and refills in minutes. Safer, cleaner, and faster than traditional bucket and drain methods. Easily installs on virtually all makes and models.

QuickEvac™ Service Tool

Portable evacuation tool that connects with the QuickFit solution and pumps used oil into waste container at the push of a button. No pans, no spillage, no mess during service.

Oil Filter Purge Tool & Auto-Off Evac Tool

Air-powered filter purge tool to remove hot oil before changing filters. Automated sensors prevent spillage and protect technicians' hands. Hands-free and manual modes optional for each job.

RPM INDUSTRIES

THE STANDARD IN FLUID MAINTENANCE

ConnexionMobile™ Maintenance Intelligence

ConnexionMobile connects the shop and the field, replacing paperwork with real-time service data. Work orders sync to handheld devices, technicians complete guided checklists, and every service event is documented — photos, notes, and time-stamped records — so maintenance leaders see problems before they become downtime.

What it does

- Work order creation and sync to handheld devices
- Customizable inspection reports created in system for the entire fleet
- Parts verification before service starts
- Service-level guided checklists
- Voice notes & photos attached to every report
- Bluetooth field printing for sample labels and customer reports

Preventative Maintenance Service Tooling

Shop and field hardware that puts RPM's process to work at scale.

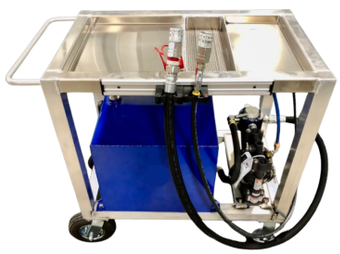

SmartSkid

Skid-mounted field lube system with wireless control and inventory tracking brings shop-grade service anywhere equipment needs it. Separate tanks avoid cross-contamination. Available in multiple capacities and configurations.

SmartTrailer (150 & 400 Gallon)

Extends SmartSkid capability onto a towable trailer with wireless controls and monitoring for full field services without returning to the shop.

Evac Lube Cart (25 Gallon)

Compact shop cart brings containment and control to shop bay service. Evacuate oil directly into containment for safer, cleaner service without drain pans or spills. Also configurable for oil sampling and fuel priming.

Bulk Oil Pump System

Shop-mounted pump station that fast-fills and evacuates field equipment directly from bulk tank. Integrated digital controls track inventory and disbursement in real time.
